Document 2: JP 2002-203879 A (JSR Corp.)

None of the documents cited in the international search report discloses the inventions described in claims 2 to 8, nor would they be obvious to a person skilled in the art. Neither of documents 1 and 2 discloses an anisotropic conductivity connector which is arranged on an inspection circuit substrate and is used to electrically connect the inspection circuit substrate and a wafer, said connector being characterized in that an elastic anisotropic conductive film has initial attributes wherein, letting R_{1g} represent the electric resistance of the conductive parts for connecting measured when a load $Y \times 1g$ is applied to the anisotropic conductive film in the thickness direction where Y is the total number of conductive parts for connecting, and letting R_{6g} represent the electric resistance of the conductive parts for connecting measured when a load $Y \times 6g$ is applied to the anisotropic conductive film in the thickness direction, the number of conductive parts for connecting having an electric resistance R_{1g} of less than 1Ω is 90% or more of the total number of conductive parts for connecting, and

the number of conductive parts for connecting having an electric resistance R_{6g} of less than 0.1Ω is 95% or more of the total number of conductive parts for connecting, and the number of conductive parts for connecting having an electric resistance R_{6g} of 0.5Ω or greater is 1% or less of the total number of conductive parts for connecting, nor would a person skilled in the art easily conceive of these features.
